

Leveraging AI to provide valuable insight through automated data capture and analysis

As firms work through audit engagements, they regularly need to request a significant number of reports from clients to get more details around transactional activity. Not often a part of the workflow, auditors must perform analysis as a separate function or rely on data specialists, leading to longer audits and no visibility on the tests performed.

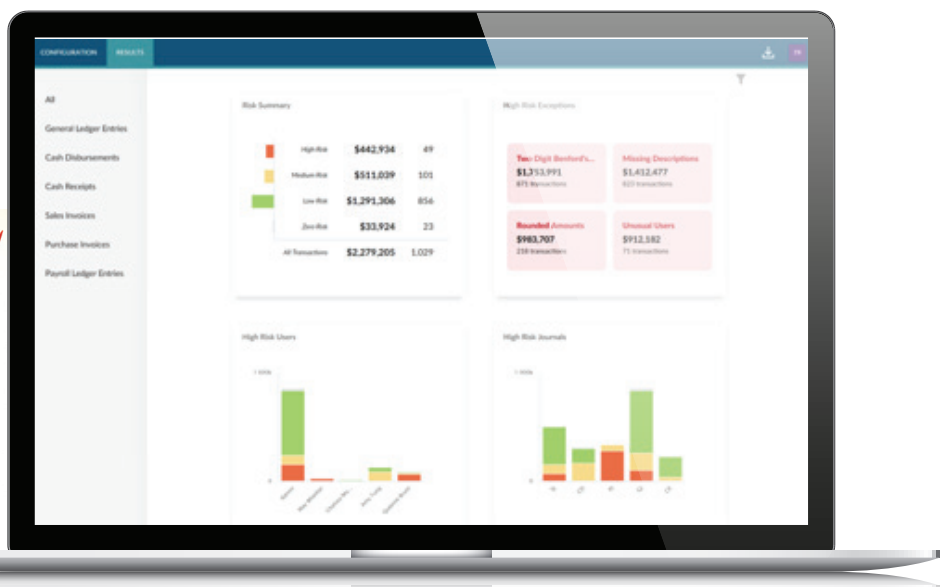

Built to help with any engagement, OnPoint AnalyticsAI, part of the OnPoint A&A Suite, is an online, risk-based, transaction level analysis tool. OnPoint AnalyticsAI swiftly analyzes transactions by automatically performing multiple routine tests on the whole transaction set to determine risk. OnPoint AnalyticsAI grants auditors unprecedented access to advanced data analytics, something that has become critical to the data-driven audit.

Features

With OnPoint AnalyticsAI, firms can reduce the time spent in transaction analysis through features including:

- Simple import & data mapping of complete transaction data sets
- Leverages AI and Machine Learning to easily spot anomalies in transactions and identify potential risk areas
- Brings automated testing into established workflows, making it easier to perform analysis in any audit engagement
- Automates the data acquisition process
- Analyzes an entire data set at once
- Allows for configuration to increase the weight of certain tests over others

Leverage risk scoring for the entire transaction set to help identify key focus areas for the engagement.

Insights that greatly impact the speed and depth of your analysis

Leveraging OnPoint AnalyticsAI during the planning phase of your audit engagements provides valuable insight through the use of AI-based transaction level testing, with benefits that include:

Tailored, Risk-based Analysis to Help Identify Focus Areas:

If an account requires a closer look, it can be designated as an 'influencer' account to help auditors determine audit priority, scope, and risk score.

Increased Confidence in Data Accuracy & Completeness:

Data completeness can be confirmed automatically through data reconciliation, control totals, and data profiles.

Powerful Insights: Compare transactions across multiple dimensions, and the clickable Risk Summary widget allows users to isolate areas of interest and examine the details.

More Meaningful Audit Analysis: OnPoint AnalyticsAI generates configuration reports with documented understandable evidence that outline analysis conducted (such as tests run, scores and parameters).
